ABS v1.1 Update Release Notes

May 24, 2017

The full version for this update is v1.1. The previous version is v1.0.

Running Platforms

Java Version 8 Update 131 or later is required for running this application, please download the newest version in the following link: https://www.java.com/en/download/

The appointment booking system has been tested and can be run in command line tools for both Windows 7 and macOS Sierra.

Bug Fixes

- Fix the error for creating a booking. If a business owner has updated business hours and doesn't update employees' working time within the new business hours, a booking cannot be created.
- Fix the error for business owner selecting logo. If a business owner doesn't select an image in Customize Layout page, the logo will be left blank.

Improvements

- Change the java project to maven project. An automated build can be generated.
- Add Customize Layout function, a business owner can change logo and background color.
- Add business owner registration for system super account.
- Show booking information after a business owner or customer completed a booking.
- Add more logging info for database manager.
- Add a super account for business registration.
- Add functions to search a registered customer. Enter the contact number and press enter in the keyboard can search registered customer lists.
- Add more Junit and acceptance tests.
- Remove N/A in customer view booking availability page. Only available time for the employee will be shown.
- Change hour and time dropdown lists for creating a booking to one list: time. When a business owner or customer select a date, only the available time list will be shown.
